

Apps to Assist with Communication

- **EarSpy:** converts your phone into a microphone and your earplugs into amplifiers
- **HearingOS:** converts you phone into a microphone and your earplugs into amplifiers
- **NRS app:** assists with making phone calls for people with hearing conditions or those requiring AUSLAN interpreting services
- **Rogervoice app:** converts phone conversations into text in real time, however requires the other party to also have the app
- **LiveCaption:** transcribes live conversations into text in real time so that you can check your understanding by reading the conversation

Most apps are free to download from the apple app and google play stores.
